E-mail: asbob17@hotmail.co.uk

A dedicated Games Technology graduate with development and design understanding seeking an opportunity to put skills of 3D design and creative thinking into practise. Base line knowledge in development, programming and coding allows best practise in skills of 3D design. I have much experience with testing software and dealing with customers and complaints, as well as being a friendly, good-natured person and approachable.

Technical Skills

Graphics	Programming	Web	Applications
Paint.NET	Javascript	HTML	MS Office
Photoshop	PERL	XHTML	Visual Studio Basics
Adobe Flash	HTML	CSS	Adobe Dreamweaver
3DS MAX	Flash Actionscript	XML	DOS Basics
Unreal UDK	Java (Android)	XSL	Android Application testing
Adobe Premiere		Javascript	Eclipse
After effects		PHP	
Scaleform			

Education

- 2009-2014** **Nottingham Trent University**
BSc (Hons) Digital Media Technology with Games Technology - **2:1 grade**
- 2007-2009** **New College Stamford**
BTEC National Diploma in Media (Games Technology) - **DMM**
- 1996-2007** **Stamford School**
Science Double award, English Language and Literature, Maths, Religious Studies, History, Geography, Russian and French. **10 GCSEs – 2 A, 7 B and 1 C.**

Business Skills

Team Working

- Team based projects for my course at University, planning a project, working as a team to make a project and evaluate as a team.

- Working at Elmhurst Energy I worked within a team to efficiently distribute the workload and ensure that the software was thoroughly tested before release with all issues discovered documents and reported to the development team.

Communication

- I have done many group and individual presentations on various topics throughout my educational career.
- When I'm not at University studying I have a job in the holidays where I talk directly to customers over the phone, whether it be dealing with complaints about products or placing orders from the company.
- While on my student placement I had to report issues clearly and thoroughly to the development team which had English language barriers as they were based in Slovakia. All of my duties on the placement were completed to a very high standard.

Problem Solving

- When I was getting to grips with programming for the first time I enjoyed deliberately changing variables and statements to see how it changed the program and strengthen my overall understanding of what was happening.
- I thoroughly enjoy setting myself a task when doing 3d modelling. I give myself a challenge to make something and I enjoy planning out how to go about making what I want and what modifications will be needed in order to achieve what I want.
- When testing new software I split up the tasks into groups to tackle the software as a whole and cover every aspect of it. The start of the testing was to compare the documentation to what we received and get my head around what the program should be doing, to which I could then test the software functionality.

Employment

2012 – Present - Elmhurst Energy

Software Testing and IT Support Year Placement. Testing software and documenting bugs within spreadsheets, and reporting these issues to the development team responsible for the coding. Completed year industrial Placement and returned straight after graduation on contract

2008- present - Lands'End Direct Merchants

Answering phones and dealing with customers while operating a PC, placing orders or offering promotions.

2004 - 2008 - Gates Nurseries Garden Centre

Customer Services and keeping the upkeep of the site

Positions of Responsibility

While on my placement if members of the team were ill or absent I would be left in charge to assign the group tasks fairly. I was also in charge of testing entire software packages that spanned from web based applications or android applications that were crucial for the future of the business. I had to ensure the whole package was installed properly to android tablets and Apple products, to allow the team to test the software.

I was the Project Manager for a group on my course. I have to ensure all the members of the team are doing their share of the work, overview any new ideas, problems or risks the project may have, and make sure that the task is complete on time to the best possible standard.

Interests

- I enjoy playing computer games for fun and also for inspiration to develop my own ideas.
- I write game ideas with story and dialogue for potential future work
- I enjoy tinkering with cars, doing maintenance and modifications. I try to never use a mechanic if I can help it.
- I am an avid quad bike enthusiast, and recently bought and modified my dream bike for use both on and off road.
- I enjoy doing 3D modelling to improve my skills to apply to a job in the future
- I am a reptile enthusiast and have plans to start a breeding program with my newly acquired python in the near future as a side project. I have started to develop my own website to help advertise this (not published yet).
